

Globalance Sokrates Fund

A challenging year comes to an end

Although inflation rates in the USA fell more sharply than expected, the Christmas rally failed to materialize in December. Instead, interest rate levels turned upward again, which weighed on the equity markets. The Globalance Sokrates fund also closed the month in negative territory. While real estate, gold and insurance linked securities withstood the volatility, negative performance contributions from equities and bonds led to a negative result for the month and for the full year. Despite painful break in 2022, the relevance and potential of the future and megatrend themes pursued by the Sokrates fund in its investment strategy has not changed. On the contrary, future-oriented investments and investments with a positive impact are more important than ever.

Statistics (Performance and risk on December 31, 2022)

Performance month of December	-2.0%	Annualized performance since 1.1.12	2.0%
Performance year to date	-15.2%	Annualized volatility	7.0%
Sharpe Ratio	0.3		

5 reasons for the Globalance Sokrates fund

- + Dynamic building blocks for your retirement savings, investment and/or foundation assets
- + The world's first investment fund with a «Footprint Report» that reveals the effect on economy, environment and society
- + Investment in long-term, sustainability megatrends
- + Dynamic adjustment of asset allocation enhances total return
- + Climate warming potential within the framework of the temperature target of the global Paris Agreement

Investment strategy

In keeping with the provisions of BVV2, Sokrates invests in a dynamically managed, broadly diversified combination of asset classes: equities, bonds, «hard assets» such as real estate, as well as in low-correlation investments like insurance-linked securities and options-writing strategies.

This approach enables us to weight the various asset classes depending on the given circumstances and our overall assessment of the markets. On that basis, the fund invests in individual positions or baskets of securities with a positive Footprint.

The attractiveness for investors lies in the broad diversification of the asset classes, the market potential of future-oriented investment themes, and the positive Footprint of the underlying entities.

potential of the
fund

This portfolio has a low warming potential

The warming potential is based on a methodology developed by MSCI ESG and indicates whether a portfolio is within the agreed target of the 2015 Paris Climate Agreement. For the calculation, the values of the individual investments are capital-weighted and added together.

Explanation: 33 % of the invested capital has a warming potential of 2 - 3.9°C.

Footprint

The impact of Globalance Sokrates Fund on the economy, society and the environment

View the fund's footprint [here](#)

The footprint of this portfolio is positive

The Globalance Footprint® shows what our investors assets around the world are doing - individually and at a glance. Our grid is simple and objective. We assess the contribution to economic prosperity, the sustainability of society and the preservation of our natural resources on the basis of nine themes.

Explanation: 10 % of invested capital has an adverse footprint, 18 % of invested capital has a balanced footprint and 73 % of invested capital has a positive footprint. Each of the nine dimensions is evaluated on a scale of 0 - 100 and assigned a weight. The Footprint total value is calculated by adding the weighted scores of the individual dimensions.

Further information

Learn more

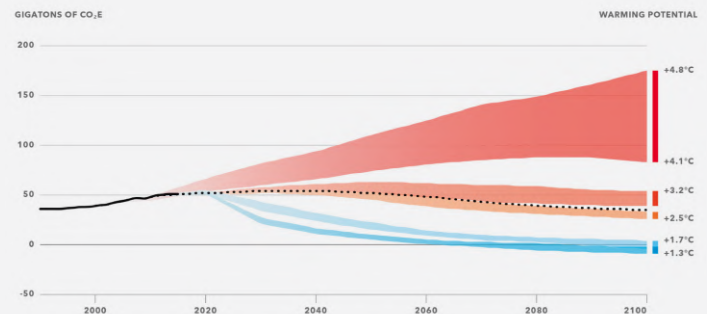

The effect of the portfolio

Increasing weather extremes, the melting of the polar ice caps and other consequences can be directly linked to global warming. The climate crisis has an impact on wealth and vice versa. The principles of sustainability are the foundations for a livable society and a healthy environment. Integrating sustainability into a portfolio increases the resilience and potential of assets.

The warming potential in a global context

To put the warming potential in perspective, we show the possible global emissions pathways to 2100 (chart). These were created by Climate Action Tracker and show different scenarios ranging from current political projections to short-term country pledges (until 2030) and long-term country pledges (until 2050).

Globalance Footprint

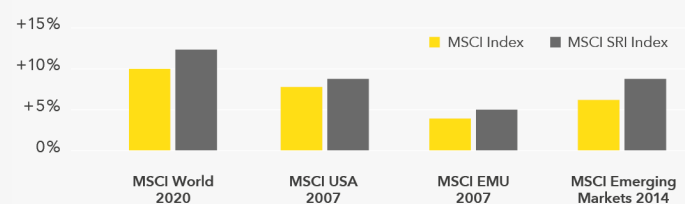

The Globalance Footprint shows what assets do in the world - in the areas of economy, society and environment. Whether shares, real estate or tangible assets: We make a systematic assessment of the impact of all investments. Our grid is simple and objective. A total of nine criteria represent sustainable foundations for prosperity, the future viability of society and the preservation of our natural life-support systems. The Footprint is positive if the value is greater than 54.

Return on investment and sustainability

Historical comparisons between traditional and sustainable stock indices (MSCI SRI Index) show that sustainable indices generate better returns than traditional ones. In addition, by integrating factors such as ESG as a risk instrument, portfolios become more resilient in times of crisis and thus offer a better risk/return profile.
