Globalance Sokrates Fund

Rising Interest Rates Dampen Market Sentiment

In September, the attention of global financial markets centred primarily on monetary policy and the renewed escalation of the conflict in the Middle East. The US Federal Reserve raised its key interest rate for the first time since 2023. Persistent inflationary pressure, geopolitical uncertainty and concerns over high levels of government debt pushed long-term bond yields higher around the world, weighing on equity markets at times. The Globalance Sokrates Fund could not escape this challenging environment and ended the month with a negative performance. The Globalance core equity selection, infrastructure investments and low-correlation assets, however, made positive contributions. The latter once again underscored their stabilising role within the portfolio and the importance of broad diversification in uncertain market phases.

Investment Strategy

The Globalance Sokrates Fund invests (in a BVV2-compliant manner) in a dynamically managed combination of broadly diversified asset classes including shares, bonds, real values such as real estate or low-correlated investments, such as insurance-linked securities or premium strategies. The investment strategy allows a tactical weighting of the asset classes depending on the market assessment. Based on this weighting, Sokrates then invests in individual assets and investment funds with a positive footprint and a low impact on climate change. Investors benefit here from the broad diversification of the asset classes, from the marketpotential of future oriented asset sectors and thepositive effect of the assets.

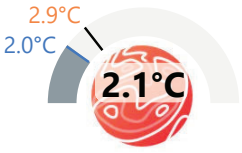

Statistics (performance and risk)

Performance month of September	-1.4%
Performance year to date	2.2%
Sharpe Ratio	0.3
Annualized performance (since 1.1.2012)	1.7%
Annualized volatility	6.4%

5 reasons for the Globalance Sokrates Fund

+ Broadly diversified investment strategy for long-term growth for your investment assets, pension plan assets or foundation assets
+ The first fund in the world to provide a footprint report on direct impact on the economy, society and the environment
+ Investment selection criteria with a view to megatrends that hold great potential, such as digitization, new mobility or urbanization
+ Fewer risks thanks to compliance with the 2.0°C climate target of the Paris Agreement
+ Dynamic control of the asset classes for an optimization of both returns and risks, depending on the market

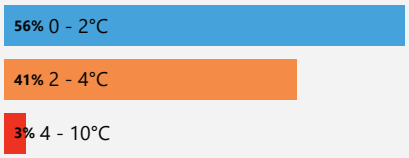

Climate

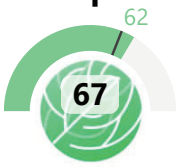

— Benchmark index
— Paris Agreement

This portfolio has a low warming potential. The majorty of this fund has a warming potential below 2.0°C.

Fund composition

Globalance

Information

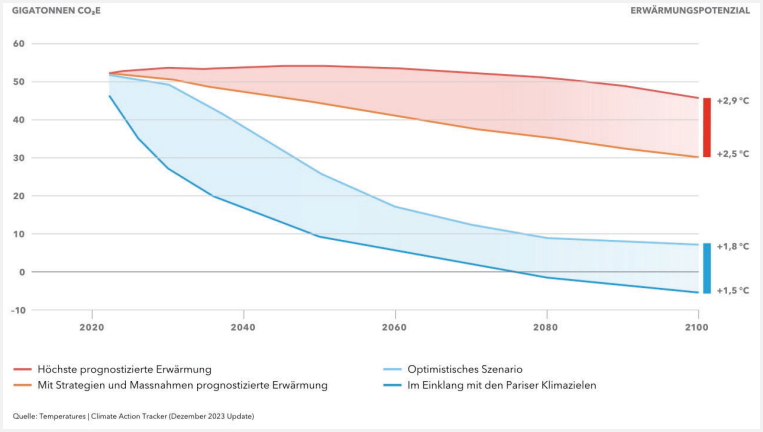

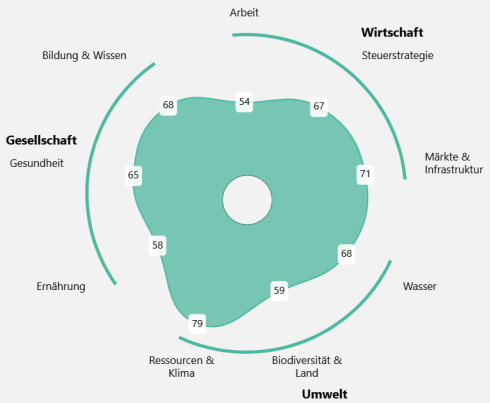

The effect of the portfolio

Increasing weather extremes, the melting of the polar ice caps and other consequences can be directly linked to global warming. The climate crisis has an impact on wealth and vice versa. The principles of sustainability are the foundations for a livable society and a healthy environment. Integrating sustainability into a portfolio increases the resilience and potential of assets.

The warming potential in a global context

To put the warming potential in perspective, we show the possible global emissions pathways to 2100 (chart). These were created by Climate Action Tracker and show different scenarios ranging from current political projections to short-term country pledges (until 2030) and long-term country pledges (until 2050).

Globalance Footprint

The Globalance Footprint shows what assets do in the world - in the areas of economy, society and environment. Whether shares, real estate or tangible assets: We make a systematic assessment of the impact of all investments. Our grid is simple and objective. A total of nine criteria represent sustainable foundations for prosperity, the future viability of society and the preservation of our natural life-support systems. The Footprint is positive if the value is greater than 54.
