

Globalance Sokrates Fund

Global Markets React to US Tariffs

Global financial markets came under significant pressure at the beginning of the month after US President Donald Trump announced new sweeping tariff measures on what is referred to as "Liberation Day." Fears of escalating trade conflicts visibly weighed on stock exchanges and, due to a loss of confidence, led to a weakening of the USD. In response to the severe market turmoil, Trump temporarily suspended the planned retaliatory tariffs against all trading partners (with the exception of China) for 90 days. This led to a stabilization of stock markets by the end of the month, although the USD remained at a low level. The Globalance Sokrates Fund ended the month only slightly lower, not least due to the stabilizing effects of gold, corporate bonds, and the USD currency hedge.

Investment Strategy

The Globalance Sokrates Fund invests (in a BVV2-compliant manner) in a dynamically managed combination of broadly diversified asset classes including shares, bonds, real values such as real estate or low-correlated investments, such as insurance-linked securities or premium strategies. The investment strategy allows a tactical weighting of the asset classes depending on the market assessment. Based on this weighting, Sokrates then invests in individual assets and investment funds with a positive footprint and a low impact on climate change. Investors benefit here from the broad diversification of the asset classes, from the marketpotential of future oriented asset sectors and the positive effect of the assets.

Statistics (performance and risk)

Performance month of April	-0.7%
Performance year to date	-2.2%
Sharpe Ratio	0.3
Annualized performance (since 11.11.2019)	2.4%
Annualized volatility	7.1%

5 reasons for the Globalance Sokrates Fund

Climate

Warming potential of Globalance Zukunftsbeweger Focused Fund

This portfolio has a low warming potential

The warming potential is based on a methodology developed by MSCI ESG and indicates whether a portfolio is within the agreed target of the 2015 Paris Climate Agreement. For the calculation, the values of the individual investments are capital-weighted and added together.

Weitere Informationen

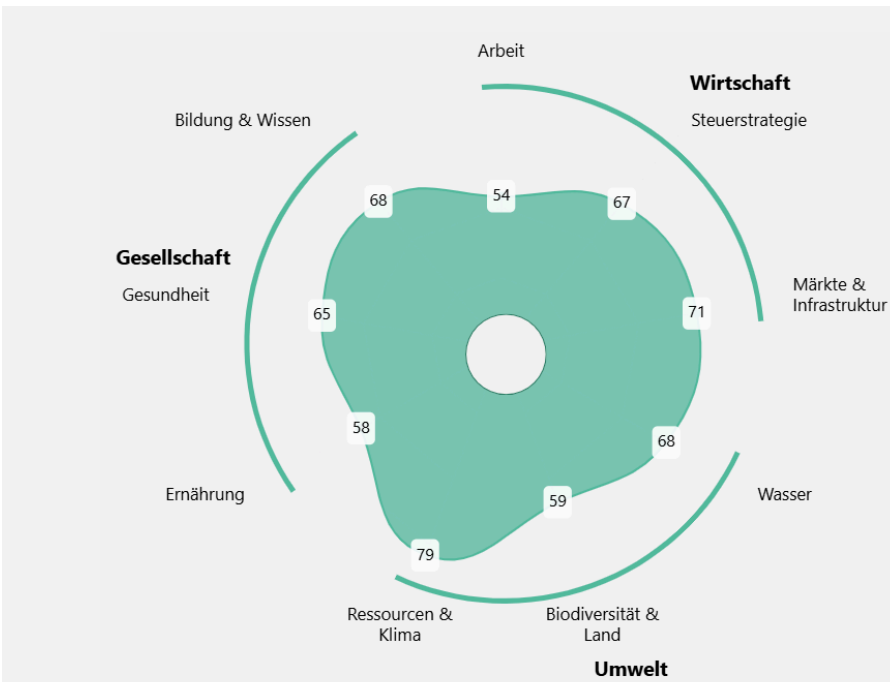

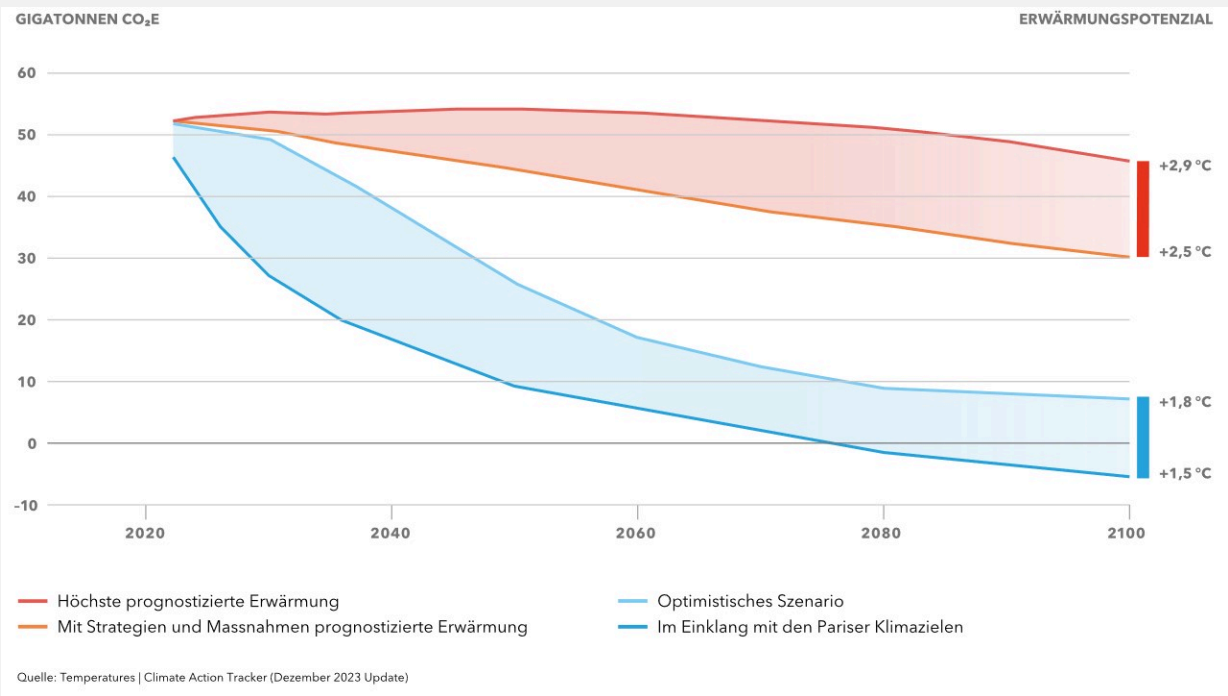

The effect of the portfolio

Increasing weather extremes, the melting of the polar ice caps and other consequences can be directly linked to global warming. The climate crisis has an impact on wealth and vice versa. The principles of sustainability are the foundations for a livable society and a healthy environment. Integrating sustainability into a portfolio increases the resilience and potential of assets.

The warming potential in a global context

To put the warming potential in perspective, we show the possible global emissions pathways to 2100 (chart). These were created by Climate Action Tracker and show different scenarios ranging from current political projections to short-term country pledges (until 2030) and long-term country pledges (until 2050).

Globalance Footprint

The Globalance Footprint shows what assets do in the world - in the areas of economy, society and environment. Whether shares, real estate or tangible assets: We make a systematic assessment of the impact of all investments. Our grid is simple and objective. A total of nine criteria represent sustainable foundations for prosperity, the future viability of society and the preservation of our natural life-support systems. The Footprint is positive if the value is greater than 54.
